

# Capability Statement

Scott Paten Consulting (SPC) is a small consultancy based in Brisbane, Australia. We provide specialist consulting services in urban soil erosion and sediment control (ESC) to a range of private and public sector clients including contractors, developers, builders, homeowners, councils and other government agencies.

## Why Choose SPC

**Experience** - We believe in leading from the front and have done so with erosion and sediment control for more than 20 years. With our long history working in the urban land development and regulatory sectors we are trusted by regulators and industry to provide the right advice and solutions to meet each client's specific needs and objectives.

**Reliability** - Our experience and longevity in the industry allows SPC to offer a broad range of specialist services in erosion and sediment control. We pride ourselves on delivering high quality, reliable products and advice to our clients.

**Results** - At SPC we believe in getting things right the first time – saving our clients time, hassle and cost. We understand the challenges our clients face in meeting their environmental obligations and can help take the pain out of compliance.

- Workshop facilitation
- Expert witness services

# Capability Statement

## About Us

### Scott Paten | Principal

CPESC, AssocDip Civil Eng, Cert IV in Assessment & Workplace Training

Scott has over 20 years' experience specialising in erosion and sediment control (ESC) and is a recognised leader in his field. He has occupied a number of high-profile technical and leadership roles in both public and private sector organisations in Queensland to support and deliver best practice erosion and sediment control outcomes.

As a Certified Professional in Erosion and Sediment Control (CPESC), experienced designer, educator and project manager, Scott thrives on helping organisations and individuals deliver practical and cost-effective ESC solutions to meet their specific needs.

From a background in stormwater drainage design Scott started his ESC career with the Brisbane City Council in the early 1990's preparing ESC Plans for a range of major council infrastructure projects, and providing onsite technical advice and ESC training to council construction staff and appointed contractors.

From the late 1990's Scott became Brisbane City Council's senior ESC specialist, helping establish and advance a range of local and regional improvements in ESC policy and standards, best practice guideline development, industry education and on-ground ESC outcomes. This included more than 14 years working with the land development sector within development assessment and regulatory compliance roles.

Prior to establishing SPC, Scott led the development and delivery of a 3-year regional ESC capacity building program within the South East Queensland and Great Barrier Reef regions.

With our growing client base and industry partners SPC is able to tailor its services and expertise to meet our clients' specific needs and performance outcomes.

We look forward to working with you on your next project. If you have any questions, please contact us.
